

Journals System

Online publishing platform

Specification

Copyright by Bentus

Journals System is a platform that enables online publishing of the scientific journal.

Journals System is fully integrated with Editorial System which enables fast and simple publication of the articles sent by Authors.

Journals System functionality:

- current issue
- articles as metadata: keywords, abstract, title, authors, doi, publish date etc.
- articles as fulltext PDF files
- archive of the journal
- intuitive and precise search engine
- supplements and special issues
- online first
- dynamic subpages like for example: editorial office, editorial board, about the journal, contact, indexing, guidelines for Authors / Reviewers, subscription etc.
- article sharing via email, link and social media
- articles' statistics
- header of the website might be configured in accordance with the visual identity of the particular journal
- configurable background color and links color
- events' promotion box
- automatically created indexes of authors, keywords and domains
- integration with external scientific databases via Editorial System
- similar articles
- integration with Editorial System
- HighWire metatags support for Google Scholar
- OAI-PMH protocol support
- sitemap.xml support
- own domain name ex. <http://www.yourjournal.com>

Each Editorial Office has its own access to CMS (Content Management System) which enables to:

- add, modify, delete articles

- view statistics of the articles
- add, modify, delete dynamic information pages of the journal
- manage files database – Editorial Office may upload different files like photos, statements etc. and embed them on information pages to be available for visitors of the journal's website
- add, modify, delete events to events' promotion box
